

Security

DEPLOYING SECURITY FORCES

COMPLIANCE WITH THIS INSTRUCTION IS MANDATORY

NOTICE: This publication is available digitally on the HQ AFSOC WWW site at: www.afsoc.af.mil/library/pubs/. If you lack access, contact the OPR to obtain a copy.

OPR: RQ AFSOC/SFOP (MSgt Kevin A. white)

Certified By: HQ AFSOC/SF (Lt Col David H. Donatelli)

Pages: 23

Distribution: F

This instruction implements AFPD 31-3, *Air Base Defense (ABD)*, and establishes requirements for AFSOC-gained Air National Guard and Air Force Reserve units upon activation to maintain specific deployable forces in support of AFSOC contingencies and the USAF War and Mobilization Plan, Volume 3 (WMP-3), during wartime or contingency operations. Applies to all AFSOC and gained units. Refer to AFMAN 10-401, *Operation Plan and Concept Development and Implementation*, AFI 10-402, *Mobilization Planning*, and AFT 10-403, *Deployment Planning*.

1. Background. This instruction provides guidance for planning, organizing, training, equipping, and deploying forces according to the Manpower and Equipment Force Packaging (MEFPAK) System. AFSOC will support non-mobilization requirements from existing active duty security forces manpower resources. The deployment program will ensure that all deployable elements have the training, equipment and organizational structure to provide effective force protection for Air Force installations, deployed weapons systems, and other resources. Deployment element identification and taskings are by Unit Type Code (UTC).

2. AFSOC Security Forces Mission Support Concept. Due to the rapid and global deployment of AFSOC aircraft, security forces personnel may be required to provide security for assigned resources beyond the requirements identified in the QFEBN Mission Capability Statement (MISCAP) or theater Operations Plans (OPLANS) (theater augmentation). All AFSOC units will be prepared to deploy personnel and equipment to provide security in support of the AFSOC mission. The scope of the security requirement may range from a one-person, unarmed, Force Protection Responsible Officer (FPRO), up to (but not limited to) a 44-person Air Base Defense (ABD) Flight (QFEBF) with full logistics detail (LOGD~ equipment

2.1. AFSOC security forces deployed in support of AFSOC missions will remain under the operational control of the deployed mission commander unless deployed in support of ABD as a QFEBF UTC. If other security forces are operating in the area, AFSOC security forces will attempt to establish a communications link and coordinate security for AFSOC resources. Although AFSOC security forces may provide mutual support to these units, Their primary mission is to secure AFSOC resources at the deployed location.

2.2. All AFSOC units should consider tasking deployable unit personnel to apply for both military and civilian passports. Use of passports will enhance your overall unit force protection program.

3. Composition of Forces.

3.1. Organize, maintain, and equip all UTCs according to the MISCAP statement and LOGDET for each tasked UTC. Obtain copies of MISCAPs and LOGDETs via HQ AFSOC/SF or your respective Wing LGX. Operations Plans (OPans) can be obtained through the respective Wing LGX.

3.2. Assign one person (primary) to each mobility position. When feasible, alternates for each mobility position should be identified and trained to the same standards as the primary person. Individuals assigned as a primary for one UTC cannot be an alternate for another UTC. To ensure continuity, personnel will not be relieved from deployment duties or reassigned from one element to another without proper justification (e.g., medical profiles, permanent change of station, separation, and cause). Avoid assigning personnel with projected permanent change of station (PCS), separation, or similar actions to a mobility position.

4. Training. Deployable personnel must maintain proficiency in combat skills and force protection training necessary for survival during contingency operations. Training will be based on UTC assignment.

4.1. Units maintaining QFEBC UTCs. Annual home-station ground combat skills (OCS) sustainment training is required regardless of participation at a MAJCOM Regional Training Center (RTC), Joint Readiness Training Center (JRTC), or Joint Chief of Staff (JCS) level ABD exercise. Unit commanders will determine the length and level of this training based on an analysis of the unit's training needs; however, as a minimum, training will include ABD line items contained in the Specialty Training Standard (STS). Home station sustainment training is intended to improve and maintain ABD perishable skills, and should not be conducted solely to "prepare" for inspections or other training deployments. The training section will schedule ABD home station sustainment training in the annual training plan and maintain documentation reflecting the type (classroom/field, etc.), length, syllabus, audience, and date training was conducted. To ensure ABD leaders maintain a cohesive, combat ready team, training will be conducted collectively as a UTC (EXCEPTION: No lower than the squad level for QFEBC). Document the individual's training in appropriate records. For Status Of Resources and Training System (SORTS) data collection (training sub-area), individuals will be considered qualified in their mobility duty position once they have completed basic GCS training (Level III-Enlisted, Level IV-Officer) and annual home-station GCS sustainment training. Consider obtaining the Level III ABD course for senior personnel.

4.2. Units maintaining QFEBN, QFEBR, and QFEBL UTCs. As identified in AFI 36-22251AFSOC Supplement 1, a minimum of 20 QFEBN personnel must attend a Regional Training Facility (RTF) annually. As a minimum one QFEBR will attend a RTF as well. Training for the QFEBL will be procured on a case by case basis. Attendance at Regional Training Centers (i.e., Air Mobility Warfare Center, Silver Flag Alpha) for UTCs, QFEBN,

QFEBL, and QFEBR will be managed by HQ AFSOC/SF and coordinated through the unit. All AFSOC deployed security team members, MWD and CATM Teams who do not attend formal training in a fiscal year will receive local training and evaluation on their position in a deployed security environment. Complete all training and evaluation before the end of the fiscal year. Field training exercise(s) (FIX) can be used to conduct all training and evaluation.

NOTE: RQ AFRC will establish and coordinate procedures for reserve/unit personnel.

4.3. All unit personnel will complete AT/FP Level I training, unless they are Level II trained. Security Advisors or the designated senior security force member must be AT/FP Level II trained. In addition, ensure all personnel receive First Aid Buddy Care and Chemical Warfare Defense (CWD) training from the appropriate training agencies.

4.4. HQ AFSOC/SFOP is responsible for coordinating with the Air Mobility Warfare Center (AMWC) and/or Silver Flag Alpha to ensure courses satisfy MAJCOM requirements and for scheduling SF UTC participation. AFSOC/SFOP will also consider requesting mobile training teams (MTT) to procure training.

NOTE: HQ ANG/SF and HQ AFRC will establish and coordinate GCS training for their assigned units.

4.5. Each unit must have one certified all-terrain vehicle (ATV) and utility vehicle (MULE) instructor. HQ AFSOC/SFOP is responsible for scheduling instructor courses. Units must identify instructor training requirements in annual training forecasts.

4.6. Recommend one person per QFEBC and one person per 2 QFEBN UTCs be nationally certified as an Emergency Medical Technician (EMT) to provide a first echelon medical care capability. In addition, ensure an appropriate amount of the personnel tasked to deploy are trained for Radio Telephone Operator (RTO) duties, pallet build-up, and certified for transport of hazardous cargo.

5. Funding. Unit commanders are responsible for budgeting for and requisitioning team and individual equipment requirements according to AFI 10-403, AFMAN 10-401 and this instruction.

5.1. Team Equipment. Unit commanders will identify, upon request, non-depot funding shortages to HQ AFSOC/SFXR. Additionally, equipment lost and/or damaged in support of contingency operations will be identified to HQ AFSOC/SFXR within 30 days of return from deployment in the following format: *Equipment Item, Cost of Item, Contingency Operation Supported*.

NOTE: For ANG and AFREC units, report missing equipment using command established procedures.

5.1.1. Individual Equipment. Unit commanders will identify funding requirements for standard mobility bag items in accordance with this instruction. Funding for standard deployment bag items will be obtained through wing channels. Units will budget for replacement of these items.

See Attachments 4 and 5 for a listing of individual deployment bag items required for Security Forces bags.

NOTE: C Bags will be developed according to wing specifications.

5.1.2. Each unit will budget for TDY costs (other than transportation) associated with training deployments. No unit per diem costs are involved for team members traveling on military aircraft. Travel orders must state: "This is a group travel order, JTR, U4000A, B and U40002. Individuals are under field conditions for the duration of deployment." Per diem does apply for units traveling on commercial aircraft. Ensure orders reflect personnel are Level 1 force protection trained.

NOTE: When required, HQ AFRC will coordinate air travel for reserve units/personnel.

6. Logistics Requirements:

6.1. Carrier, Light Auxiliary Weapons System (CLAWS). CLAWS procured to support unit mobility missions will not be used to support day-to-day operations, i.e., law enforcement or flightline patrols, and/or open houses/air shows (EXCEPTION: CLAWS may be used for static displays during open houses/airshows). These assets may be used for training/certifying personnel for mobility purposes only. Operators must comply with all current safety and certification requirements.

NOTE: This section applies to ATY and MULES.

6.1.1. Storage Procedures:

6.1.1.1. Turn the gas flow valve off and let the carburetor fuel bowl run out of gas.

6.1.1.2. Pour a tablespoon of denatured alcohol (NSN 6810-00-543-7415) through the fuel line into the carburetor fuel bowl to prevent moisture build-up.

6.1.1.3. Keep the gas tank full of gas to reduce moisture build-up. A fuel stabilizer can be purchased and added to the tank for long term storage if there is a problem with gas going bad.

6.1.1.4. Install a block under the frame of the CLAWS to keep tires off the hard surface while in long-term storage (prevents flat spots and weather rotting of tires).

6.1.1.5. Disconnect batteries and regularly check fluid levels during long-term storage.

6.1.1.6. Recharge batteries on a regular basis.

6.2. Vehicles. High mobility multi-purpose wheeled vehicles will be on-hand at the Air Mobility Warfare Center (AMWC) for familiarization training. The AMWC will ensure fully mission capable (FMC) vehicles are provided for mission support training exercises.

6.4. Carrying Weapons. SF personnel will hand-carry unloaded weapons aboard AFSOC

aircraft, unless the load master approves otherwise. The manifesting agency or troop commander will conduct weapons safety inspections and will certify that previously cleared personnel have no unauthorized weapons, ammunition, explosive devices, or other prohibited items. The troop commander will also ensure that any explosive device or material is sealed in the proper container and retained under the control of the aircraft commander or aircrew. Control of ammunition will be in accordance with AFI 24-201, *Cargo Movement*.

6.5. Equipment Maintenance. Unit and individual equipment will be kept in a high state-of-readiness at all times. Consider packing small items of equipment in nesting boxes or similar locally fabricated packing crates. To facilitate accountability and rapid identification of unit equipment, identify and pack boxes by squad for QFEBCs.

NOTE: Ensure high cost equipment items are permanently marked with the appropriate unit identification.

6.6. Team Equipment. Commanders will devise a system to ensure unit team equipment requirements identified in the appropriate UTC LOGDETs are available and maintained.

NOTE: Unit Readiness & Mobility NCOs will ensure assigned UTC equipment is listed in the SF Table of Allowances, and if not, coordinate completion of an AF Form 601 through your respective supply function to remedy the problem. Follow all "Pilot Unit" procedures outlined in AFMAN 10-401 and AFSOC Instruction 10-401.

6.7. Individual Equipment. Commanders will ensure individual mobility equipment identified in Attachments 4 and 5 are available and maintained according to this instruction.

6.7.1. Procurement of individually-sized items will be for personnel assigned to primary and alternate mobility positions.

6.7.2. If a primary member of a security UTC is unable to deploy, (alternate, if assigned) will deploy using the primary member's mobility bags, replacing only sized items as necessary.

6.7.3. Items that are necessary in the daily performance of duties will not be duplicated in individual mobility bags.

6.8. Control and Accountability of Team and Individual Equipment. Strict control and accountability procedures must be in use to prevent unlawful retention or misuse of equipment. As a minimum, commanders will ensure the following procedures are in force:

6.8.1. Procedures for conducting and documenting at least quarterly unannounced checks of equipment. These checks will include a random inventory of at least 10 percent of each type mobility bag maintained by the unit.

6.8.2. Procedures for the turn-in, cleaning, and inventory of all equipment within 5 duty days after return from deployment.

6.8.3. Procedures for control and accountability of equipment while in storage and during

training exercises.

6.9. Security forces equipment will be stored in an area where entry is controlled and can be limited to specific personnel.

6.10. Individual mobility bags will be secured with a tamper-proof seal.

6.11. Maintain a complete inventory of all security forces equipment using the Security Police Automated System (SPAS).

6.12. Ranger Body Armor (RBA) or equivalent suitable substitute vest tested to meet National Institute of Justice (\$13) Standard-0101.03.

6.12.1. Protection. RBA protects the wearer against multiple ballistic threats: three types of bullets and fragments in general (e.g., mines, mortars, grenades and artillery fire). The RBA 111-A vest protects the wearer (front and back) against multiple shot 9mm and 44 magnum threats. Additionally, it provides approximately the same fragmentation protection as the current kevlar vest. When the RBR A IV Ceramic Plates are inserted, the front and rear vital area is protected against at least single-hit 30-06 AP grade bullets to a maximum of 2850ft/s.

NOTE: Ranger Body Armor also produces a TWA III Ceramic Plate, which will protect against 7.62mm (308 Winchester) FMJ 150 grade bullets up to a velocity of 2750 ft/s.

6.12.2. General. RBA covers the upper torso and contains an aramid ballistic filler, which is encased in a ripstop nylon carrier. These inserts (front and back) are contained within the vest itself. The vest outer shell is a woodland camouflage printed, water repellent treated nylon. The upgraded plates are fabricated of hardened steel which is coated to provide protection from rust and corrosion. The plates are inserted into the pockets on the front and rear of the vest.

6.12.3. Application/Removal Procedures. The vest is donned over the head and possesses an inner waist amp for proper positioning as well as individual fit. The outer waist straps overlap and fasten to the vest front. Improved fit may be achieved by adjusting the shoulder straps. The vest is to be worn under any ammunition carrying equipment, rucksack or cold weather clothing. Per T.O. 14P3-1-141, chemical protective clothing will be worn under the RBA.

6.12.3.1. Plate Jettison. The upgrade plate is easily accessed by inserting the hand between the plate pocket flap and the vest pulling the pocket flap out of the pocket and allowing the plate to drop out of the pocket.

6.12.3.2. Quick Removal. The RBA may be quickly removed by releasing the outer waist strap, grasping the center front of the vest at the neckline and pulling the vest front off the body. The shoulder straps should release with the vest front pulled freely away from the vest back. The inner waist strap may then be released, allowing the vest back to drop. This procedure may be accomplished with or without the plate.

6.12.4. Proper Wear. It is essential that the RBA be sized, fitted and worn properly to maximize

its protective capabilities. Maximum protection is achieved when at least one inch of overlap occurs on the vest sides and at the shoulders. If this is not achievable (especially with cold weather or chemical protective clothing), try the next larger size. In addition, the vest sides must be properly aligned, matching the lengthwise direction. Use the hook and pile on the side flaps to achieve proper alignment.

6.12.5. Cleaning, Storage, and marking:

6.12.5.1. Remove loose dirt and lint from all the hook and pile closures with a soft to medium bristle brush. NEVER USE A STIFF BRISTLE BRUSH.

6.12.5.2. The outer woodland camouflage shell (ballistic inserts and plate removed) may be machine washed warm, non-chlorine bleach only and tumble dry on a low setting. Do not iron, dry clean, or use commercial laundry. Hang the shell to dry away from heat or open flame. DO NOT IMMERSE THE VEST IN WATER WITHOUT REMOVING THE BALLISTIC INSERTS AND PLATE.

6.12.5.3. The ballistic inserts may be removed from the vest for cleaning. The inserts pull out of the vest at lower front and back openings. Remove loose dirt from the carrier surface with a soft cloth or brush. Do not submerge in water, do not bleach, do not use commercial laundry, and do not dry clean. Do not open the carrier itself.

6.12.5.4. Store the vest flat as folding may cause bunching. It is recommended that the vest be stored in a plastic bag to keep out dust, dirt, and moisture.

6.12.5.5. Permanently mark each vest and plate with your respective unit identification. Marking on the vest should be placed on top center back (inside), in 2 inch block letters and each plate should be marked top center in 2 inch block lettering. Additionally, each vest will be numerically numbered for accountability. Place a 2 inch block number on the right bottom front (inside) of the vest.

7. Administration:

7.1. In coordination with the installation deployment officer, commanders of tasked units will develop inputs to the base deployment plan for tasked elements according to AFI 10403. Inputs will include procedures to rapidly assemble deployment forces to meet the minimum deployment time for support of contingencies.

7.2. Each AFSOC security forces leader deployed for training or real-world operations will forward an after action report (RCS: AFSOC-SF (AR) 9402) to HQ AFSOC/SF within 30 days of arrival back at home station. This information is required to improve deployment processes and support the command Remedial Action Program (RAP).

NOTE: When requested, the 421 TS (AMWC) will provide each MAJCOM (with deployed UTC's) a detailed after action report after completion of the training course. The report will include a factual summary of the UTC's readiness, identifying strengths and recommended

improvement areas.

8. Tests and Inspections.

8 1. HQ AFSOCAG will inspect units during Operational Readiness Inspections (ORI), IAW AFI 90-201 and applicable supplements.

8.1.1. Units with a wartime mission are evaluated on their operational readiness or their ability to conduct combat operations in wartime. AFSOC evaluates the unit on how well it can respond, employ forces, provide mission support, and the ability to survive and operate in a combat environment.

8.1.1.1. AESOC/IG facilitates the development of realistic ORI scenarios in conjunction with JCS, JRX, or other exercises. Exercises are selected from available funded exercises and not normally in addition to the units' regular exercise schedule for example FOAL EAGLE.

8.1.1.2. AFSOC/IG may elect to visit the unit during other exercises or operational deployments to observe unit employment events.

8.2. AFSOC/IG will also conduct Compliance Inspections (CI).

NOTE: HQ AFRC IC will conduct reserve unit compliance inspections.

8.2.1. Compliance Inspections will cover those items requiring actions by US laws, Executive Orders, DoD Directives, Air Force Instructions, and Safety, that, if not complied with, could result in significant legal liabilities or penalties.

VERNE W. AVERY, Lt Col, USAF
Director of Security Forces
